EDUCATION

University of Louisiana Monroe | Monroe, LA

May 2027

Bachelor of Science in Computer Science | GPA: 3.97/4.0

Relevant Courses: Artificial Intelligence, Data Structures & Algorithms, Files & Databases, Operating Systems

TECHNICAL SKILLS

Languages: Go, Java, JavaScript, TypeScript

Frameworks & Technologies: Gin, React, Next.js, Node.js, gRPC, Protocol Buffers, REST APIs, WebSockets

Databases: PostgreSQL, SQLite, MongoDB, Redis

Cloud & Tools: AWS, Google Cloud Platform (GCP), Docker, Git, GitHub, Postman

PROJECTS

Rally | *Go, gRPC, Protocol Buffers, PostgreSQL, Redis, WebSockets, React Native, Docker*

- Built a real-time group location-sharing application using Go microservices for authentication, group management, and live location tracking.
- Implemented gRPC and Protocol Buffers for service-to-service communication and bidirectional streaming, with a WebSocket gateway delivering live location updates to a React Native map client.
- Used PostgreSQL for persistent data and Redis for live location state and pub/sub, with JWT-based authentication and Docker Compose for local service orchestration.

JobSync | *Go, React, PostgreSQL, Gmail API, Google Sheets API, Google OAuth*

- Built a full-stack job application tracker with a Go backend and React web interface that automatically organizes job applications from Gmail.
- Integrated the Gmail API and Gemini API to process job-related emails and classify application statuses such as applied, interview, and rejected.
- Implemented Google Sign-In for authentication and Neon PostgreSQL for persistent application data, enabling users to securely access and manage their job-tracking information.

Stash | *Go, Gin, PostgreSQL*

- Built a Git-like command-line version control system in Go for creating project snapshots, tracking file history, and restoring previous file states locally.
- Implemented remote push and pull synchronization with project initialization and configuration management, enabling file versions to be stored and synchronized across environments.

HACKATHON

Litmus | *Python, FastAPI, React, PostgreSQL, AWS S3, Groq LLM*

April 2026

- Built an AI hiring pipeline that evaluates candidates by cross-referencing GitHub activity, LinkedIn experience, and portfolio projects against the job description's tech stack to assess real-world coding habits and stack alignment
- Engineered a multi-source scoring system using Groq LLM to generate role-specific technical assessments delivered via token-gated email, backed by FastAPI, JWT auth, AWS S3, and a React 19 frontend

CERTIFICATIONS & ACHIEVEMENTS

AWS Certified AI Practitioner – *Amazon Web Services (AWS)*

April 2026

- Demonstrated foundational knowledge of AI/ML concepts, generative AI, responsible AI practices, and AWS AI services.

NLN Hackathon – *Nepali Leaders Network*

March 2026

- Developed **Mindcare**, a mental wellbeing check-in platform using React, Go, and ML-powered insights to provide supportive, non-diagnostic daily assessments, personalized tasks, and streak-based engagement.
